Re-accredited by NAAC with 'A' grade (3.58/4) | Awarded Category – I by UGC
Founder: Prof. Dr. S. B. Mujumdar, M. Sc., Ph. D. (Awarded Padma Bhushan and Padma Shri by President of India)

Assignment No. 14

Subject:	DevOps Lab
TCODE:	TE7950
Name of Student	**Deepak Rathod**
PRN No.	**23070122175**
Branch	CSE, Batch (2023-27), L3
Academic Year & Semester	2026, Sem VII
Date of Performance	23rd July, 2026
Title of Assignment:	CI/CD: Jenkins Pipeline building Docker Image
Theory:	A Jenkins Pipeline automates the Continuous Integration and Continuous Deployment (CI/CD) process by executing a series of predefined stages such as source code checkout, build, test, and deployment. In this experiment, a Docker image was built automatically using Jenkins after fetching the application source code from a GitHub repository. The docker build command created a versioned Docker image using the Jenkins build number as the image tag, ensuring unique image versions for every pipeline execution. This integration of Jenkins and Docker enables consistent, repeatable, and automated application builds, reducing manual effort and improving software delivery efficiency. **Commands Used** • docker build -t my-jenkins-docker . • docker run -d --name myjenkins --restart unless-stopped -u root -p 8080:8080 -p 50000:50000 -v jenkins_home:/var/jenkins_home -v /var/run/docker.sock:/var/run/docker.sock my-jenkins-docker • docker exec -it myjenkins docker --version • docker exec -it myjenkins rm -rf /var/jenkins_home/workspace/Declarative-Pipeline-Demo • git add . • git commit -m "Add Dockerfile for Jenkins pipeline" • git push origin main • docker images

Implementation:	Step 1: Access and Edit Your Pipeline Configuration  Accessed Jenkins Pipeline Configuration — Opened the existing Declarative Jenkins Pipeline and navigated to the Pipeline configuration section to modify the pipeline script. Step 2: Add the Build Docker Image Stage  Added Docker Build Stage — Modified the existing Declarative Jenkins Pipeline by adding a new stage to build the Docker image using the docker build command with the Jenkins build number as the image tag. Step 3: Run the Pipeline

```

[Pipeline] }
[Pipeline] // stage
[Pipeline] stage
[Pipeline] { (Declarative: Post Actions)
[Pipeline] echo
Pipeline finished.
[Pipeline] }
[Pipeline] // stage
[Pipeline] }
[Pipeline] // node
[Pipeline] End of Pipeline
Finished: SUCCESS
```

Executed Jenkins Pipeline — Successfully executed the Jenkins Declarative Pipeline containing the Docker image build stage. The pipeline completed successfully, and the Docker image was built and tagged without errors.

Step 4: Verify the Docker Image

```
C:\Users\riavi\OneDrive\Desktop\jenkins-docker>docker images
                                                                                                    i Info →  U  In Use
